

Biodynamic® Seed Search Documentation

CROP YEAR:

Biodynamic Farm Standard Section 1G Seeds, Seedlings, and Perennial Planting Stock pg. 22 and 23.

For seed that is imported there must first be a search for Biodynamic seed. If Biodynamic seed is not available in the quantity or quality needed, then there also needs to be a search for certified organic seed with the same parameters. In the event Biodynamic or organic seed may not be available in varieties that fit your farming system an exception to use non organic seed can occur given a documented search for Biodynamic/ organic seed has occurred and the seed is shown to be non GMO and not treated with prohibited materials.

Certified Biodynamic® seed producers include:

- [Meadowlark Hearth](#)
- [Turtle Tree Seed](#)

I. List varieties of your home-grown seed or root stock to be used

II. List varieties of Biodynamic® or organic seed or rootstock to be used with name of supplier. Keep records to support this and have them available for the evaluator.

Variety	Supplier	Variety	Supplier
